Lifestyle Assessment

I acknowledge that I have reviewed the lifestyle assessment, I am at least 18 years old, and I am responsible for the services selected/not selected for my pet.

Vaccine Information

I understand that vaccinations and parasiticides will substantially reduce, but may not completely eliminate, my pet's chances of contracting or controlling the illnesses or parasites we are trying to prevent. No refunds, substitutions, alterations or additional discounts allowed for packages. Your vaccine package purchase is eligible for 4 months of redemption. For the most protection, pets should receive boosters at specified intervals. If interval timeframes are exceeded for boosters, your veterinarian may recommend additional boosters outside of the package and those will be administered at the client's expense.

Side Effect

I understand that my pet may develop side effects after vaccination and/or administration of parasiticides and that these side effects are usually minor and resolve without need for additional veterinary care. Common side effects may include:

- Lethargy/Depression/Sleepiness
- Decreased Appetite
- Limping/Soreness over Vaccination Site
- Antisocial behavior (cats and some dogs)
- Small Swelling at/over Vaccination Site

If you are concerned by any behavior or symptom your pet exhibits after the administration of a vaccine or parasiticides, contact our Customer Service Department at **877-838-7468. If any symptoms persist for over 48 hours, please contact your regular veterinarian.** I understand the toll-free Customer Service line is not staffed by veterinarians and therefore they cannot diagnose, treat or advise me in any event concerning the health of my pet or its symptoms/behavior. However, it is recommended that I report any suspicious symptoms/reactions so they can be properly reported and monitored.

I understand that should my pet develop any severe, reaction or any behavior/symptom that is of concern to me emergency veterinary care may be necessary and it is my financial responsibility to seek care at the nearest veterinary facility.

CATS ONLY: Malignant Cancer at injection site

I understand that in addition to the side effects described above, following the administration of any vaccine, my cat may develop an aggressive, malignant cancer at the injection site. I understand that if my cat develops this cancer all veterinary costs incurred for the diagnosis and treatment are at my expense.
